

# BIG.

AT LAST, A PRODUCT TO MATCH YOUR IDEAS.

# CELEBRATE THE NATURAL APPEARANCE AND CONTOURS OF AN EXISTING LANDSCAPE

These big blocks mean big possibilities. With Stone Strong®'s many unique advantages, you now have the ability to create in ways you never thought possible. At last, there's a product flexible enough for any project—and any idea you dream up.

## BENEFITS TO ARCHITECTS/CONTRACTORS

- Handsome chiseled-stone façade is very realistic. The molds were made from stone blocks hand-chiseled by artisans.
- The tapered sides of the blocks allow for both straight and winding designs—even convex, concave, and circular designs.
- With various sizes and accessories, Stone Strong Systems can accommodate large and small projects. Ideal for commercial, municipal, or residential applications.
- Scaled in size to be proportionate in tall commercial and industrial settings.
- Walls can reach heights of up to 21-feet without geo-grid reinforcement (depending on site and soil conditions). With proper engineering, walls can reach heights of 40-feet.
- Since you can stack the blocks almost vertically, you'll be able to maximize the use of valuable land by placing a wall almost directly on a property line.
- With all the cost savings built into a Stone Strong system, you can save your client money or put dollars towards other parts of your design.
- Due to their size, Stone Strong blocks dramatically reduce labor costs. Installation is many times faster than a small-block project.
- Stone Strong blocks are the only fully engineered blocks of this size on the market. Durability and quality are built in.
- Stone Strong blocks do not look like precast concrete. You and your client will find them visually pleasing—if not stunning.
- This complete system offers various accessories to put the finishing touches on your project.

The stones can be stained to match any color imaginable—so it can fit seamlessly into your design or the natural surroundings of the landscape.

### Available in two custom patterns.

The Split Granite pattern (left) matches the classic look of natural chiseled stone. The Navajo pattern (right) matches the organic look of rough natural stone.
